NUBIDA

On-premises web software for spatial communication

Skip the words and drawings — talk it through in the space

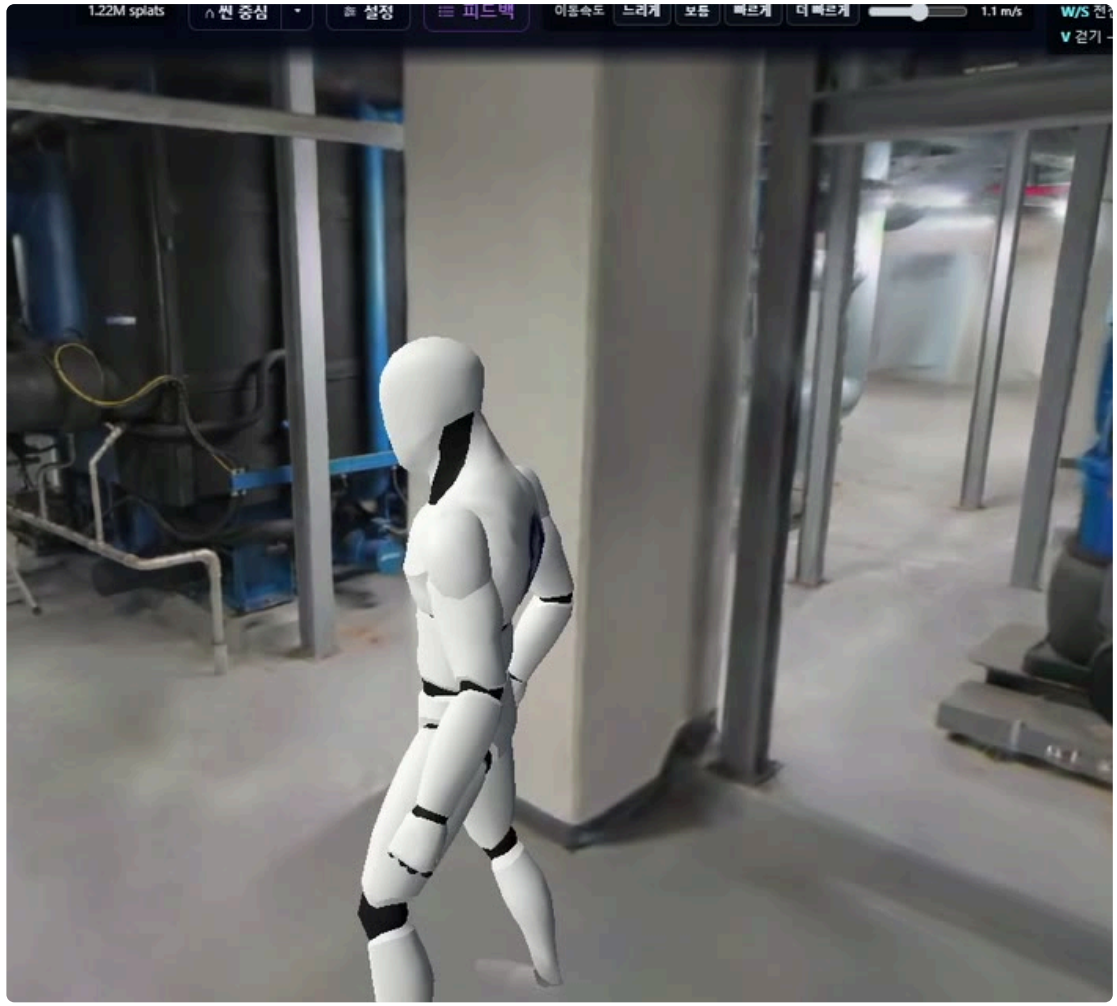

One 3D scan → point cloud · Gaussian

One browser

One PC on your network

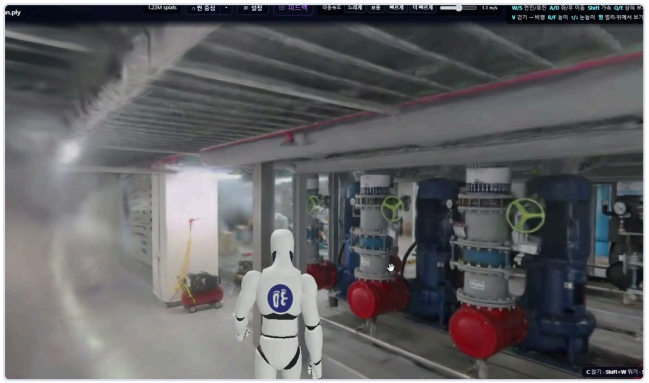

Roam it now

nubida.kr · no install, no sign-up

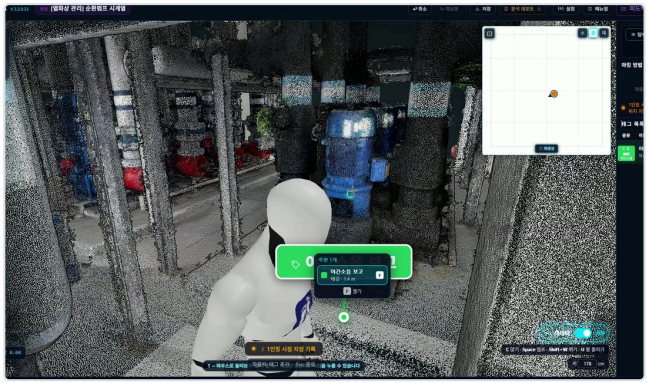

What is NUBIDA?

Heavy 3D scans — roamed and recorded in a browser

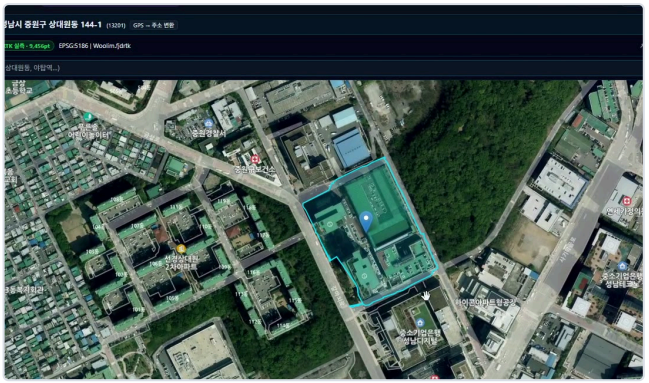

Roam

Walk in, in first person

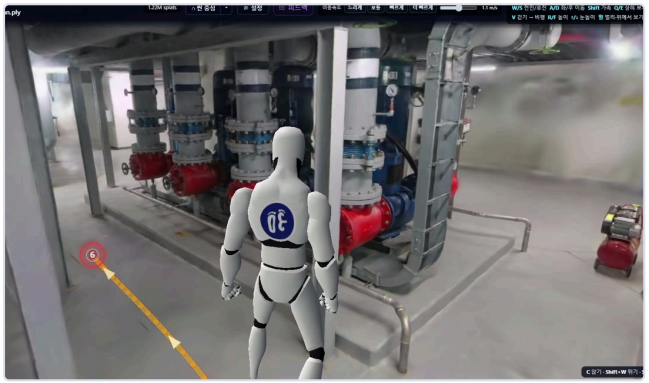

Record

Photos and documents on the spot

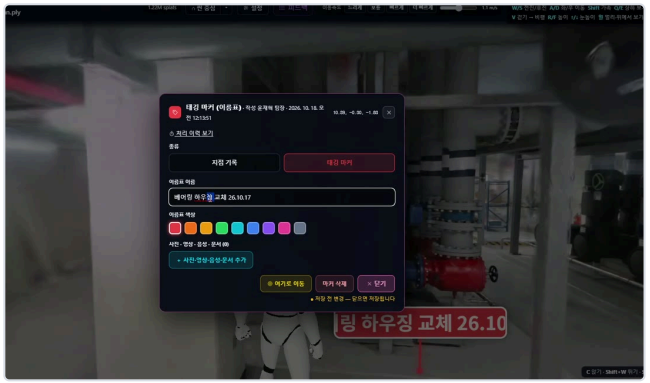

On the map

Placed on real coordinates

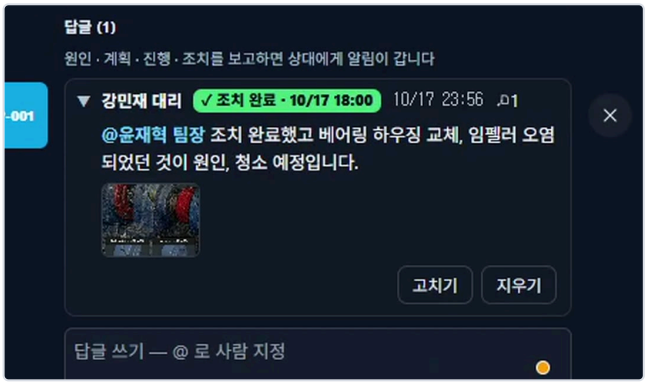

Route video

A tour video from clicks

Gaussian 3D

Show it photo-real

Share & resolve

Notify → go there → report the fix

With specialist and manufacturer software

Worth a great deal — but not easy to open

Tens of GB

Massive point clouds · high-end PC needed

Experts only

Menus full of generic technical terms and processes

Extra licences

A separate install for every user

Generic SW

Shared across industries — not your work process

Those who know the site best ✕ **The spatial data**

Out of reach, it goes unused — and teams can't talk about the space

NUBIDA

goes past those limits

BEFORE		NUBIDA
~~High-spec PC~~	→	One browser
~~Experts only~~	→	Anyone · as easy as a game
~~Every feature at once~~	→	Only what you need
~~The vendor's way of working~~	→	Your words, your procedures
~~Vendor-specific formats~~	→	Any scanner — LAS is enough
~~An install and licence per person~~	→	One PC install · others join on the web
~~Explaining with words and drawings~~	→	See it together in 3D · history kept

How you communicate through space

Leave it on the spot — answer it on the spot

1 Record
Drop a marker at the exact point · tag its category

→

2 Attach
Photos · video · audio · documents · 3D scans

→

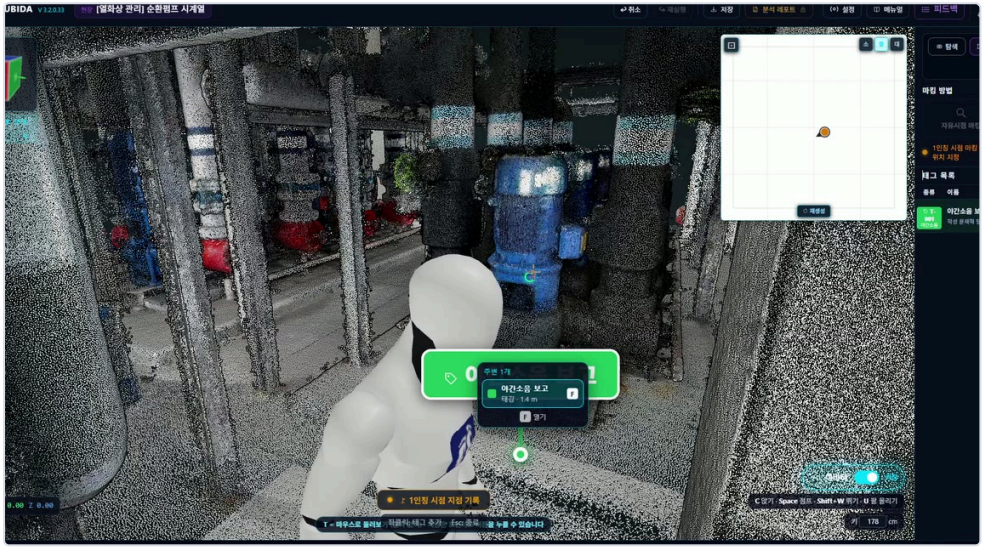

3 Pass on
@owner and due date → notification · to-do

→

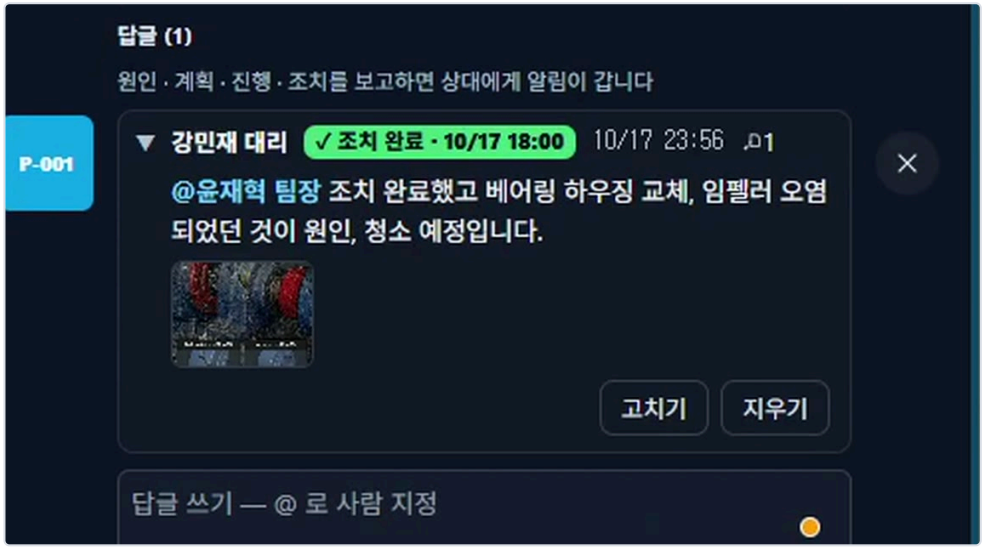

4 Reply
One tap to the spot · report the fix with replies and photos

→

5 Confirm
Sign off or send back · history goes into the maintenance report

Record · attach Photos and documents on the point

Share · resolve Share → notify → report → confirm

Not words and drawings, but the exact spot — the space becomes the work board

Need a feature?

Just send it — and it gets added

How feedback works

Capture an area

↓

Pick a type — feature · improvement · bug

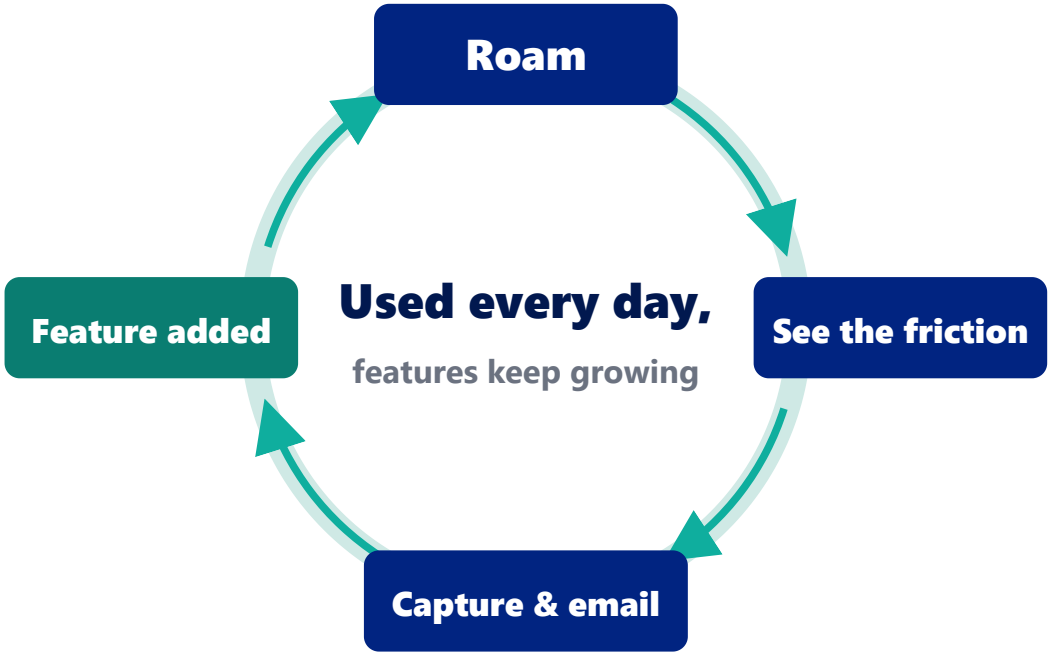

↓

Mark it with the pen · add a note

↓

Save and email

It grows as you use it

Analysis tools built from field requests

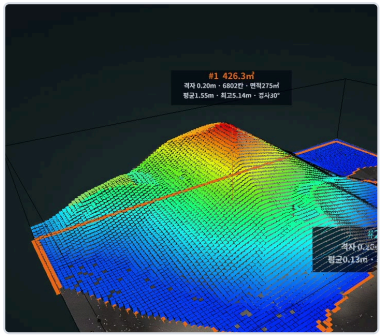

Add only what you need

"We need length and area off a section"

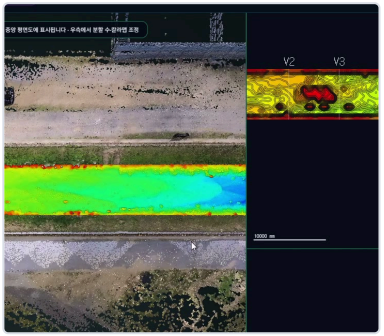

2D section

"How much is in the pile — how many trucks?"

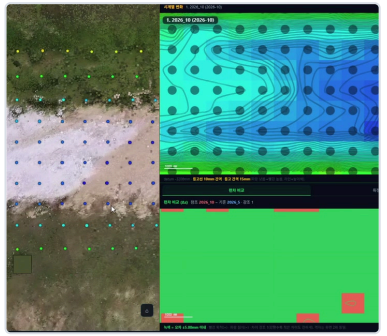

Pile volume

"River deposition and scour, as contours"

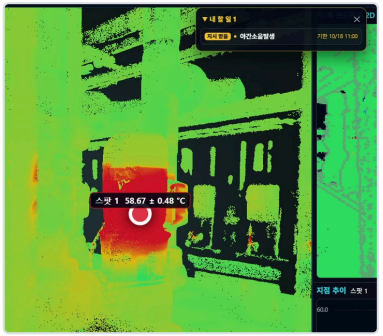

River contours

"How much has the riverbed moved?"

River change over time

"Thermal capture works — nothing to do with it"

Thermal time-series

Field request → tool · detached when not needed · being wrong costs one feature

As features accumulate, it grows into a platform for your line of work

NUBIDA_river-change | NUBIDA_facility-inspection | NUBIDA_rail-facility | NUBIDA_scene-record | NUBIDA_fire-investigation | NUBIDA_marine-facility | **NUBIDA_your own work**

Getting started

Three things are enough

A scanner, or spatial data
LAS · E57 · PTS · XYZ · PTX · any scanner

An operating system
One gaming-class PC · others join over the intranet

NUBIDA software
Installed and trained by J3D

Feasibility check → **Base deployment** → **Feature development** → **Maintenance**

A contract per stage · quoted

3D FOR AUTOMATION

More than a 3D scanner supplier — your partner in industrial digital process change

Want to try it on your own site? One email is enough
